CESBA STT - the first tool for the sustainability assessment of territories

The CESBA STT online-tool has been designed for assessing the sustainable development performance of territories. Based on 280 indicators it can be contextualized at local level and used for setting a scoring/rating system. It allows to reflect local standards and degrees in the sustainability field, defining for each assessment criterion a territorial performance scale.

With the CESBA Passport the tool also offers the possibility to compare the sustainability performance of territories at transnational level in absolute terms. To this purpose, 18 key performance indicators in line with the UN 2030 Agenda and EUSALP strategy goals have been defined.

A demo version of the online-tool is available here (<https://demo-tool.cesba.eu/login>).

With the following login data you can view our demo-version:

■ User: demo
